Swim England

Statement regarding nutritional supplement use in athletes under 18 years of age

Swim England work closely with British Swimming and UKAD to ensure a consistent message is provided to the sport of swimming regarding the taking of medications and nutritional supplements.

Swim England do not promote the use of nutritional supplements by athletes under the age of 18. Throughout all ages and stages of the aquatic pathway, we promote a food-first approach to nutrition. Athletes under 18 should look to optimise their nutritional intake for training and competition through a well-organised, balanced diet. Snacks to support fueling for and recovery from training and competition can be gained from food sources rather than supplements. However, there may be certain instances where supplements may need to be considered on an individual basis. It is important that athletes consult with a qualified nutritionist/dietitian (e.g. SENr) before considering the use of supplements, where they shall undergo a dietary analysis and thorough risk assessment of the supplement.

Nutritional supplements can carry a high risk of inadvertent doping through consumption of a banned substance contained within the supplement. Often this banned substance is the result of product contamination during the manufacturing phase or incorrect labelling of product ingredients. In order to minimise the risk of inadvertent consumption of a banned substance, the supplement can be screened for the presence of banned substances by an audit and certification program such as Informed-Sport. This risk minimisation programme registers products which have been screened and are deemed to be free of banned substances. However, there are no guarantees that any supplement product is free from prohibited substances.

Swim England does not support the use of nutritional supplements which are not registered with the Informed-Sport programme.

Athletes should be aware of the principle of 'Strict Liability' within anti-doping rules which means that they are responsible for any prohibited substance (or its metabolites or markers) found in their bodily specimen regardless of its source of origin (i.e. whether a banned substance was consumed intentionally or not). Any competitive member of Swim England can be tested at any time as part of British Swimming's Anti-doping policy. Swim England members are subject to the jurisdiction of British Swimming for anti-doping purposes.
